

Using Aliases

What You Will Learn

- Aliases

Aliases

- Shortcuts
- Use for long commands
- Use for commands you type often

Creating Aliases

```
alias [name[=value]]
```

List or create aliases.

Use name=value to create a new alias.

Aliases

- Fix Typos

```
$ alias grpe='grep'
```

- Make Linux behave like another OS.

```
$ alias cls='clear'
```

Removing Aliases

`unalias name`

Remove the “name” alias.

`unalias -a`

Remove all aliases

Persisting Aliases

- Add aliases to your personal initialization files.
 - `.bash_profile`

Demo - aliases

Summary

- The alias command lists and creates aliases.
- The unalias command deletes aliases.
- Persist aliases in your dot files.
